A Full-spectrum Transmittance Measurement Instrument is a device designed to measure the transmittance of light across the entire spectrum, typically ranging from ultraviolet (UV) to visible and infrared (IR) wavelengths. It works by directing a broadband light source through a material and analyzing the transmitted light intensity at various wavelengths. This instrument is essential for evaluating the optical properties of transparent or semi-transparent materials, such as glass, films, or coatings, providing critical data for applications in solar energy, optics, and display manufacturing. Its non-destructive nature and high precision make it invaluable for quality control and material research.
