A fully automatic atomic force microscope (AFM) is a sophisticated scientific instrument used for imaging and manipulating matter on a nanoscale level. It combines the principles of scanning probe microscopy with advanced automation capabilities. An AFM operates by scanning a tiny, sharp probe tip across the surface of a sample. The tip, much smaller than a human hair, interacts with the atoms and molecules on the surface, generating a three-dimensional map of the sample's topography. This allows scientists to examine surface features and measure properties such as rough, hardness, and electrical conductivity.
