?Fully automatic calorimeter? is an instrument used to measure the thermodynamic properties of a substance. Its working principle is based on the first law of thermodynamics. By measuring the heat change of a substance during the heating and cooling process, it can calculate the thermodynamic properties of a substance, such as heat capacity. , enthalpy, entropy, etc. The fully automatic calorimeter realizes automated operation through computer control. It can automatically complete thermal measurement methods such as displacement heat method, isothermal titration method, isothermal dilution method, etc., and process the measurement data through the computer to obtain the required thermodynamic parameters. It is widely used in Research on thermodynamic properties of various substances and industrial applications.
