The global Fully Automatic Drum Washing Machine market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of % from 2025 to 2031.

Tumble wash is used in all front load washing machines where the washing drum is positioned horizontally that rotates on a horizontal axis. Hence, in a tumble wash system, the clothes fall down from a small height slowly while the drum is rotating. This causes the clothes to tumble continuously in the drum. During a tumble wash, more concentration of detergent enters into the laundry. This washing process takes more time because the tumbling/spinning is slow. Tumbling of clothes results in more effective washing because it closely resembles washing by hands. The continuous dropping of clothes from small height create the most efficient wash experience as the dirt loosens quickly and more effectively. On top of this, it can wash with much less water as compared to any other type of wash.
