The global Fully Automatic Laser Grooving Machine market size is predicted to grow from US\$ 314 million in 2025 to US\$ 605 million in 2032; it is expected to grow at a CAGR of 10.0% from 2026 to 2032.

Laser grooving is a versatile and precise processing technology that is essential for various processes in semiconductor manufacturing, including wafer cutting, microelectronic device manufacturing, thin film deposition, etc. It is able to create clean and precise grooves on semiconductor substrates, making it an important tool for advancing semiconductor technology and manufacturing capabilities.

The fully automatic laser grooving machine integrates an intelligent control system and an automated material transfer module, and can independently complete the entire process from material loading, parameter setting, laser processing to finished product inspection. The equipment is usually equipped with a high-precision motion platform, a machine vision positioning system, and an AI algorithm optimization module to achieve unattended and efficient production, and is suitable for large-scale mass production scenarios such as photovoltaic silicon wafers and integrated circuits.

The market for fully automatic laser slotting machines has shown a rapid growth trend in recent years, mainly benefiting from the increase in the demand for precision processing in high-end manufacturing and the iterative upgrade of laser technology. With the surge in demand for micron-level high-precision slotting processes in fields such as 5G communications, semiconductor packaging, new energy vehicles and consumer electronics, laser slotting machines have gradually replaced traditional mechanical cutting equipment with their advantages of non-contact processing, high efficiency and low loss.

In the global market, the Asia-Pacific region (especially China) has become the core growth pole due to the concentration of the electronic manufacturing industry chain and policy support, while Europe and the United States focus on high-end applications such as automotive electronics and aerospace. In terms of the competitive landscape, international leaders (such as DISCO and ASMPT) and Chinese companies (such as Dr Laser and Delphi Laser) have formed a technological catch-up trend, and domestic substitution has accelerated.

In the future, the market will evolve towards intelligence (AI parameter optimization), integration (composite processing modules) and ultrafast laser technology, while green manufacturing and cost control are key challenges.
