## Abstracts

The global Fully Automatic Laser Wire Stripping Machine market size is predicted to grow from US\$ 449 million in 2025 to US\$ 671 million in 2032; it is expected to grow at a CAGR of 6.0% from 2026 to 2032.

In 2025, global fully automatic laser wire stripping machine production capacity is approximately 23,000 units, with actual production reaching around 18,000 units. The average global market price is about US\$25,000 per unit. The market gross profit margin mainly ranges from 30% to 40%. A fully automatic laser wire stripping machine is an automated device that uses a laser beam instead of a traditional blade to perform non-contact, high-precision stripping of the insulation layer of cables (such as electronic wires, coaxial cables, and optical fibers). It uses a vision system to automatically identify cable location and specifications. A precision motion platform and laser combine to precisely illuminate and strip the material in specific areas, eliminating the need for human intervention. This process is designed to meet the stringent requirements of precision electronics manufacturing for damage-free, highly consistent, and micro-dimensional processing. The upstream supply chain for fully automatic laser wire stripping machines includes suppliers of core components such as lasers and motion control systems. The midstream is technology-intensive, offering complete system integration and software development. The downstream market caters to demanding industries such as automotive electronics and precision medical devices. Global annual production capacity is approximately several thousand units, employing a multi-product, small- to medium-batch production model. Due to its high level of technological integration and compliance with specific industry standards, this product boasts a significantly higher gross profit margin than traditional wire processing equipment, estimated to be between 35% and 50%. By 2024, production of fully automatic laser wire stripping machines is expected to reach approximately 2,100 units, with an average

global market price of approximately US\$200,000 per unit.

The fully automatic laser wire stripping machine market is experiencing strong growth driven by the electrification of automobiles and the miniaturization of medical equipment. Its prospects are deeply intertwined with the demand for high-reliability wire harness processing and non-destructive material handling, placing higher demands on the equipment's processing accuracy and adaptability. The European market, leveraging its deep foundation in precision manufacturing and leading automotive industry demand, continues to define the technical standards for high-end equipment. The North American market, with its robust aerospace and medical technology innovation ecosystems, maintains a steady demand for specialized application solutions. The Asia-Pacific market, particularly China, demonstrates the strongest growth potential through its largest electronics manufacturing base and rapidly emerging new energy vehicle industry chain, and is gradually becoming a core global manufacturing and application center.
