The global Fully Automatic Magnetron Ion Sputtering Instrument market size is predicted to grow from US\$ 125 million in 2025 to US\$ 205 million in 2032; it is expected to grow at a CAGR of 7.4% from 2026 to 2032.

In 2024, global production of fully automatic magnetron ion sputtering instruments reached 1974 units, with an average selling price of US\$61,000 per unit. A fully automatic magnetron ion sputtering instrument is a high-precision deposition device used for depositing nanoscale thin films. It uses a magnetic field to confine and enhance plasma in a vacuum environment, causing argon ions to bombard the target material, thereby sputtering and depositing target atoms or molecules onto the substrate surface to form a uniform and dense thin film. Applications include scanning electron microscopy (SEM) sample preparation, micro/nano fabrication, functional thin film preparation in semiconductors and solar cells, and biological sample imaging. Its "fully automated" characteristic is reflected in the integrated control of the entire process flow, including vacuuming, ventilation, pre-sputtering, deposition, and process monitoring, through programmable logic controllers (PLCs) or computer systems, significantly improving process repeatability and stability. The industry's gross profit margin remains between 35% and 45%.

United States market for Fully Automatic Magnetron Ion Sputtering Instrument is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
