The global Fully Automatic Modified Atmosphere Packaging Machine market size is predicted to grow from US\$ 420 million in 2025 to US\$ 579 million in 2032; it is expected to grow at a CAGR of 4.8% from 2026 to 2032.

Fully Automatic Modified Atmosphere Packaging Machines are food packaging machinery that uses a vacuum system followed by the introduction of a specific mixture of gases (such as nitrogen, carbon dioxide, and oxygen) to replace the air inside the packaging. This inhibits microbial growth, slows down the food's respiration rate, and thus extends its shelf life. The upstream mainly consists of raw material and core component suppliers, including metal raw materials such as steel and aluminum, as well as key components such as vacuum pumps, gas mixing devices, PLC control systems, and sensors. The downstream sector broadly covers the food packaging application industry.

Global sales in 2024 were approximately 50,000 units, with prices varying depending on specifications and features, ranging from \$10,000 to \$30,000 per unit. The industry's gross profit margin was between 25% and 35%.

The fully automatic chain modified atmosphere packaging machine is almost entirely automated. Equipped with a chain conveyor system, it can automatically complete all steps such as food conveying, vacuuming, gas filling, and sealing, greatly reducing manual intervention.

The fully automatic modified atmosphere packaging (MAP) machine industry is showing a steady growth trend globally, primarily driven by the increasing demand from the food industry for extended shelf life and maintained product appearance. Future industry

development will focus more on the deep integration of automation and intelligence. Simultaneously, with growing environmental awareness, the development and application of sustainable and environmentally friendly packaging solutions are becoming important trends.
