Wafer Laser Stealth Dicing Machine is a semiconductor cutting equipment that uses laser stealth dicing technology. Stealth Dicing technology is a laser dicing technology that uses lasers, which has such features as the "completely dry process", "no kerf loss", "no chipping", "high bending strength" and the like. Stealth Dicing technology is a technology that focuses a laser beam of a wavelength that permeates through materials, focus internally and forms a starting point for cracking the wafer, then applies external stress to the wafer, separating it. The process is comprised primarily of two parts, namely the "laser irradiation process" in which the SD layer is formed to crack the wafer interior and the "expansion process" for separating the wafer.

Fully-automatic Wafer Laser Stealth Dicing Machine is an equipment that can realize fully automated operation in a series of processes from wafer loading, position calibration, dicing, cleaning, drying, to unloading.
