A Fully Automatic Wafer Probe Equipment, is a specialized piece of equipment used in semiconductor and microelectronics testing and characterization. It is designed to automate the process of probing and testing semiconductor devices, integrated circuits (ICs), microchips, and other electronic components. Compared with manual and semi-automatic probe stations, the fully automatic probe station adds a wafer material handling unit (MHU) and pattern recognition (automatic alignment). Responsible for the transportation and positioning of wafers, so that the dies on the wafers come into contact with the probes in turn and are tested one by one. It can work continuously for 24 hours and is usually used for chip mass production or has some special requirements such as processing thin wafers, packaging substrates, etc.

United States market for Fully Automatic Wafer Probe Equipment is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
