A fully automatic X-ray inspection machine is a device that uses X-rays to conduct non-destructive inspection of objects. It emits X-rays through the X-RAY generator, penetrates the object to be inspected, such as batteries or circuit boards, and then the imaging system receives X-rays for imaging and photography. Relevant software will process the image and automatically measure and judge to determine good and defective products. This kind of equipment is usually used for product inspection in the electronics manufacturing industry, such as lithium batteries, semiconductors, PCB and other industries. It can detect defects that cannot be detected by the naked eye and other online inspection methods.
