A fully continuous pyrolysis plant is a type of pyrolysis system that operates continuously, without the need for batch processing. In a continuous pyrolysis plant, the feedstock is continuously fed into the reactor vessel, and the process runs continuously for extended periods of time. Fully continuous pyrolysis plants are typically larger in size and have a higher processing capacity compared to batch pyrolysis systems. They are suitable for large-scale operations and can handle a variety of feedstocks such as waste

plastics, rubber, and biomass.
