Abstracts

The global Fully Digital AC Servo System market size is predicted to grow from US$ 132 million in 2025 to US$ 182 million in 2032; it is expected to grow at a CAGR of 3.4% from 2026 to 2032.

In 2025, the global production of fully digital ac servo systems reached 270,400 units, with an average selling price of 500 USD per unit. In 2025, the global production capacity for fully digital ac servo systems was approximately 400,000 units, and the gross profit margin was about 27.6%. A fully digital ac servo system is a servo control system centered on digital technology, mainly consisting of a digital servo drive (servo amplifier) and a digital controller (such as a PLC or CNC), used to control the motion of AC servo motors. The upstream industry chain of fully digital ac servo systems includes power semiconductors, control chips, feedback components, and other items. The midstream segment consists of manufacturers of fully digital ac servo systems, while the downstream primarily covers applications in medical, electronics, textile, and other industries.

currently, the market for fully digital ac servo systems remains active, driven by the global upgrade of industrial automation and the push for smart manufacturing. as downstream industries such as medical equipment, electronics manufacturing, and textile machinery impose higher demands on motion control precision and response speed, this system, with its full digital control, high flexibility, and easy integration, has become a core choice for precision motion control. on the technology front, systems are evolving toward higher bandwidth, stronger noise immunity, and more intelligent self?tuning and fault diagnosis capabilities, while being deeply integrated with industrial ethernet and the internet of things to support remote monitoring and data?driven optimization, meeting the needs of flexible manufacturing and digital workshops. users
