The global Fully Humanized Monoclonal Antibody market size is predicted to grow from US\$ 2731 million in 2025 to US\$ 6808 million in 2032; it is expected to grow at a CAGR of 14.2% from 2026 to 2032.

Fully Humanized Monoclonal Antibody is an antibody that has been entirely engineered from human sources, with no original non-human components. Unlike humanized monoclonal antibodies, which retain some animal-derived regions, fully humanized antibodies are created using techniques like phage display or transgenic mice to produce antibodies that are completely derived from human genes. This results in antibodies that are more likely to be well-tolerated by the human immune system, reducing the risk of adverse reactions and making them ideal for therapeutic applications, such as treating cancer, autoimmune diseases, and infectious diseases.
