The fully redundant by-wire chassis is an advanced automotive chassis technology that replaces traditional mechanical connections with a by-wire control system to achieve electronic control of vehicle steering, acceleration, braking and other functions. The fully redundant design means that the system is equipped with redundant backups on each key control component to ensure that when the main system fails, the backup system can immediately take over to ensure the safe operation of the vehicle. This technology is widely used in the fields of autonomous driving, intelligent connected vehicles, etc., improving the control accuracy, safety and reliability of the vehicle.
