The global Fully Sealed Power Relays market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

A fully sealed power relay is a specially designed power relay with a completely sealed case. It is constructed with a hermetically sealed metal or glass enclosure to protect internal components and circuitry from the outside environment. The hermetic casing of the fully sealed power relay can effectively prevent the intrusion of moisture, dust, pollutants and other environmental factors to the internal circuit. This design makes the hermetically sealed power relay more durable and reliable, especially suitable for harsh industrial environments or application scenarios with potentially hazardous substances. Hermetically sealed power relays are usually used in applications requiring high reliability and hermeticity, such as aerospace, military equipment, nuclear power plants, chemical processes, and marine engineering. They are often used to control high voltage, high current and high power loads for protection and switching control.
