The global Functional Multicolour Coated Board market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of % from 2025 to 2031.

As the deep-processing product of hot-dip galvanized aluminum plate, the color coated plate has better corrosion resistance and simultaneously

Beautiful decoration performance. During the production of color coated plates, each process shall be strictly controlled to ensure good quality in terms of appearance, durability and processability; At the same time, the price of color coated panels produced in large quantities is lower. Compared with the coating treatment method for finished products, the content of solid components in the coating is higher, the loss of organic coating is lower, and it is more economically feasible. Color-coated panels are widely used in the exterior decoration of products in the construction, home appliances, automobiles and other industries, among which the construction field is the most widely used. As prefabricated components of houses, roofs, floor panels, wall panels, doors and windows, and enclosure structures, they are widely used in various industrial plants, warehouses, cold storage, office buildings, residential buildings, villas, venues, etc. At the same time, according to the characteristics of different surface organic coatings, the muticolor coated plate can meet the construction and production of production workshops and facilities with green environmental protection or other special functional requirements such as food, cosmetics, medicine, electronic information, etc.
