The global Functional Organic Calcium Supplements market size is predicted to grow from US\$ 312 million in 2025 to US\$ 442 million in 2032; it is expected to grow at a CAGR of 5.2% from 2026 to 2032.

Functional organic calcium supplements are dietary supplements with calcium pyruvate (calcium pyruvate) as the main ingredient. They are generally marketed for supplementing calcium and supporting energy metabolism, athletic performance, or weight management. Pyruvate is an intermediate product in the body's glucose metabolism and energy production processes and is related to the tricarboxylic acid cycle. Calcium itself participates in physiological processes such as bone health, nerve and muscle contraction. Therefore, some products advertise benefits such as 'increasing metabolic rate' and 'controlling weight with exercise.' Actual effects vary depending on dosage, individual metabolic status, and dietary/exercise habits. Currently, clinical evidence is relatively limited, and they are generally recommended as a general nutritional supplement rather than a replacement for drugs or professional weight loss treatments. In 2024, sales volume was 3050 tons, with an average price of \$100,000, total production capacity of 3500 tons, and a gross profit margin of 44%.
