## Abstracts

The global Functional Water-based Coating Agent market size is predicted to grow from US\$ 9090 million in 2025 to US\$ 14520 million in 2032; it is expected to grow at a CAGR of 7.1% from 2026 to 2032.

In 2024, global Functional Water-based Coating Agent production reached approximately 1.76 billion kilograms, with an average global market price ranging from US\$ 4.2 to 6.5 per kilogram. The gross profit margin of major companies in the industry is between 32% – 45%. Single-line production capacity is 180,000 – 320,000 kilograms/year. Functional Water-based Coating Agent is a water-dispersed coating product that achieves specific functional properties (e.g., anti-corrosion, anti-scratch, UV resistance, thermal insulation, or anti-fouling) by adding modified additives, nanomaterials, or functional resins. It uses water as the main dispersion medium, with VOC (volatile organic compound) content usually <math>\leq 100\text{g/L}</math>, far lower than solvent-based coatings. It is widely used in automotive (exterior/interior surface protection), electronics (circuit board insulation), construction (building exterior decoration), and packaging (food contact materials) industries, meeting environmental regulations and substrate-specific functional requirements.

The global Functional Water-based Coating Agent market is primarily driven by strict global environmental regulations—regions such as the EU (via REACH) and China (via 'Dual Carbon' policies) have imposed strict limits on VOC emissions, forcing the shift from solvent-based to water-based coatings, with the automotive and electronics sectors accounting for over 60% of total demand. Technological advancements, such as the application of nanocomposite additives to enhance scratch resistance and cross-linking resins to improve adhesion, further expand application scenarios. Additionally, the growth of the green construction and food-safe packaging industries has boosted

demand for eco-friendly, non-toxic functional coatings. However, challenges include higher costs of specialty functional additives (e.g., nanoscale UV absorbers) compared to conventional additives, and the need for upgraded application equipment (e.g., high-pressure electrostatic sprayers) to match the fluidity of water-based coatings. Note that Tata Steel and TCC Steel are mainly steel suppliers (providing substrates for coating application), while core manufacturers like Arakawa Chemical and AGC focus on R&D of multi-functional formulations and expansion of production capacity in emerging economies (e.g., India, Southeast Asia) to capture growth opportunities from local industrial upgrading.
