Fungal biopesticides are biological pest control agents derived from fungi that naturally infect and kill agricultural pests, such as insects, weeds, or plant pathogens. These biopesticides utilize fungi like Beauveria bassiana, Metarhizium anisopliae, and Trichoderma species, which produce spores that attach to the pest, penetrate its body, and disrupt its vital functions, ultimately causing death. They are environmentally friendly, target-specific, and help reduce chemical pesticide use, making them a sustainable option for integrated pest management in agriculture, horticulture, and forestry. Fungal biopesticides are gaining popularity due to their safety for humans, animals, and beneficial organisms.

United States market for Fungal Biopesticides is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
