Fungal proteins for feed refer to microbial proteins produced through large-scale fermentation of fungi, such as yeasts and filamentous fungi, and used as a protein supplement in animal feed. These proteins are characterized by high protein content, balanced amino acid profiles, and excellent digestibility. As they can be produced independently of arable land, fungal proteins offer a sustainable and eco-friendly alternative to traditional protein sources. They are commonly applied in feed for aquaculture, swine, and poultry, and some products also provide bioactive components like ?-glucans and mannan oligosaccharides, which help support gut health and immune function in animals.
