The global Furnace Brazing market size is predicted to grow from US\$ 205 million in 2025 to US\$ 302 million in 2031; it is expected to grow at a CAGR of 6.6% from 2025 to 2031.

Furnace brazing is a semi-automatic process used widely in industrial brazing operations due to its adaptability to mass production and use of unskilled labor. There are many advantages of furnace brazing over other heating methods that make it ideal for mass production. One main advantage is the ease with which it can produce large numbers of small parts that are easily jigged or self-locating. The process also offers the benefits of a controlled heat cycle (allowing use of parts that might distort under localized heating) and no need for post braze cleaning.

The world's leading manufacturers of Furnace Brazing include Bodycote, Altair and Byron Products. The top three companies account for about 41% of the market. North America is the world's largest Furnace Brazing market with a market share of about 35%, followed by Asia Pacific and Europe with a market share of 33% and 26%, respectively. In terms of product type, Vacuum Furnace Brazing is the largest segment with approximately 68% market share. In terms of application, Aerospace is the largest downstream segment, accounting for about 36% of the market.
