The global Furnace Imaging Systems market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

The furnace imaging system is used to observe the combustion process in the closed area of the equipment. In this process, the temperature and shape of the flame need to be monitored, and these areas may not be observed from the outside, so a furnace camera system is needed. It generally consists of a camera, a retraction device, a control unit, a cooling device, and is used in conjunction with a software program.

United States market for Furnace Imaging Systems is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
