Fuse holders are electronic devices that are used for containing, mounting, and protecting fuses. Fuse holders basically come in two types: open and fully enclosed. Open fuse holders are fuse blocks, clips, plug-in caps, and socket varieties. Fully enclosed fuse holders use a fuse carrier, which is inserted into the holder or some other part to fully enclose the fuse.

The power sector segment accounted for the maximum market share and will continue to dominate the market for the next few years. One of the major factors responsible for the market segment's growth is the rise in industrialization and rapid infrastructure development on a global level that has created a huge demand for electricity and investments in the improvement and modernization of the power sector.
