A fused disconnect switch is a combination of a switch to disconnect the circuit and a fuse to shut the circuit off in the event of a problem. When installing or maintaining equipment on the circuit, or the circuit itself, the switch provides a method to manually shut off the power.

Fused disconnect switches have many advantages. They are usually smaller and more reliable than circuit breakers, as they have fewer moving parts. Additionally, they are very cost-effective, since after the fuse element has blown due to an overcurrent situation, it can be easily replaced with a new one instead of being reset.
