The report requires updating with new data and is sent in 48 hours after order is placed.

A fused fiber optic WDM coupler (also called wavelength selective coupler, dichroic coupler, or wavelength combiner/splitter) obtains light from two inputs with different wavelengths (λ_1 & λ_2) and feeds it into the same output fiber. When used in the reverse direction, the fiber optic WDM coupler is capable of separating the two wavelengths. This implies that all the input power at λ_1 emerges at one output port and all the input power at λ_2 emerges at the second output port.

The global Fused Fiber Optic WDM Coupler market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
