Fused quartz insulation board is an insulation board made of high-purity fused quartz (also called Fused Silica or quartz glass). Fused quartz is an amorphous (glassy) form of silicon oxide (quartz, silica), which is made by rapid cooling after high-temperature melting. Fused quartz has extremely high thermal stability and can withstand high temperatures of up to 1750°C or even higher, which allows fused quartz insulation boards to maintain stable insulation performance in high-temperature environments. Fused quartz is almost unaffected by any chemical substances and has excellent chemical stability, thus ensuring the reliability and durability of the insulation board in a variety of chemical environments. Fused quartz insulation board has a low thermal conductivity, which can effectively block the transfer of heat, reduce energy loss, and improve energy efficiency. Fused quartz has high transparency at high temperatures and can transfer heat through radiation, making its thermal conductivity exceed other materials in some cases.

The global Fused Quartz Heat Shield market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
