The report requires updating with new data and is sent in 48 hours after order is placed.

Fused quartz is a non-crystalline (glass) form of silicon dioxide (quartz, sand). It lacks long range order in its atomic structure. Its highly cross-linked three-dimensional structure gives it a high using temperature and low thermal expansion coefficient. In optics, fused silica glass has a high transmittance from ultraviolet to near-infrared (185nm-00nm). Coupled with low refractive index variations, it exhibits ideal optical qualities for high-precision optics applications. In addition, the physical properties of fused silica glass make it particularly useful for high-performance applications in harsh conditions. This report mainly focuses fused quartz optics market.

The global Fused Quartz Optics market size is projected to grow from US\$ 273 million in 2024 to US\$ 435 million in 2030; it is expected to grow at a CAGR of 8.1% from 2024 to 2030.
