The global Fused Silica Micro Lens Array (MLA) market size is predicted to grow from US\$ 162 million in 2025 to US\$ 298 million in 2032; it is expected to grow at a CAGR of 9.3% from 2026 to 2032.

Fused Silica Micro Lens Array (MLA) is a versatile micro-optical component capable of modulating incident light through diffusion, beam shaping, light homogenization, and optical focusing. It enables wide viewing angles, low aberrations, minimal distortion, high temporal resolution, and infinite depth of field. These characteristics make MLA highly promising for the miniaturization, intelligence, and integration of optoelectronic devices and optical systems.

Fused silica micro lens arrays (MLAs) are gaining traction in precision optics and photonics applications due to their exceptional thermal stability, high transmission in the UV to IR spectrum, and superior durability. These MLAs are essential components in optical communication systems, LiDAR, beam shaping, medical imaging, and semiconductor lithography. The demand is particularly strong in markets such as the United States, Germany, Japan, South Korea, and China, driven by advancements in 3D sensing, automotive electronics, and photonic integration.
