The global GaAs CNC Phase Shifter Chip market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

GaAs CNC phase shifter chip is a microwave integrated circuit chip based on the compound semiconductor material gallium arsenide (GaAs). It is mainly used in the radio frequency (RF) and microwave fields to control the phase and delay of signals. Such chips are commonly used in communications systems, radar, satellite communications and other applications requiring high-frequency signal processing. GaAs digitally controlled phase shifter chips have the characteristics of high speed, low noise, low power consumption and high frequency, so they are widely used in high-frequency communication and radar systems. It can change the phase of the radio frequency signal by adjusting the control voltage, thereby achieving phase modulation and delay control of the signal.

United States market for GaAs CNC Phase Shifter Chip is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
