## Abstracts

The global Gallium Nitride Target market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of % from 2025 to 2031.

Gallium nitride target is a key material for semiconductor thin film preparation technologies such as physical vapor deposition (PVD) and magnetron sputtering (sputtering). It is usually made of high-purity gallium nitride (GaN) material, which has good thermal conductivity, electrical conductivity and chemical stability. In preparation technologies such as PVD and sputtering, the gallium nitride target is placed in a vacuum chamber, and then the atoms on its surface are released by means of ion bombardment or thermal evaporation, and deposited on the surface of the semiconductor wafer to form the desired film structure. Because gallium nitride has excellent electrical and optical properties, gallium nitride targets have been widely used in the manufacture of semiconductor devices, such as for the preparation of high-brightness LEDs, lasers and power devices.

United States market for Gallium Nitride Target is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for Gallium Nitride Target is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.
