The global GalNac Conjugates market size is predicted to grow from US$ million in 2025 to US$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

GalNAc is a ligand for the asialoglycoprotein receptor (ASGPR), which is an endocytic receptor highly specifically expressed on the surface of liver cells, with minimal expression in other cell types.GalNAc conjugated with peptides or oligonucleotides (including siRNA and ASO) has broad application prospects in the biomedical field.The development of GalNAc oligonucleotide conjugates for the targeted delivery of RNA interference therapeutics to liver enabled great advances in the oligonucleotide potency. With the successful translation in human clinical trials, this strategy has been widely adopted for a variety of nucleic acid therapeutics, including ASOs and anti-microRNAs (anti-miRs). The GalNAc peptide conjugate is one of the most fascinating types of therapeutic entities in the domain of pharmacology. It consists of a peptide or protein drug that is intricately connected to a GalNAc (N-acetylgalactosamine) molecule, forming a remarkable hybrid structure. This complex architecture aims to enhance the selectivity and transport of the therapeutic agent to desired cellular and tissue sites while simultaneously mitigating the danger of non-specific, off-target effects.

United States market for GalNac Conjugates is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for GalNac Conjugates is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
