A Galvanometer Mirror is an optical reflective mirror mounted on a galvanometer actuator to redirect a light beam according to the angular movement of the galvanometer. It is a core optical component of galvanometer scanners, laser beam steering systems and precision optical positioning systems. The mirror converts the mechanical angular displacement of the galvanometer into controlled optical beam deflection, and its performance directly affects beam pointing accuracy, scanning precision, reflectivity, wavefront quality and system reliability.

In 2025, global sales of Galvanometer Mirror reached approximately 2,670 K Pieces, with an average global market price of around US$ 65/Piece. Production capacity varies significantly among manufacturers, with gross profit margins ranging from approximately 30% to 60%.
