The global Galvo-type Fiber Laser Welding Machine market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

A galvo-type fiber laser welding machine is a type of laser welding equipment that utilizes galvanometer scanning technology in combination with a fiber laser source. This type of machine is specifically designed for high-precision and high-speed welding applications. The key components of a galvo-type fiber laser welding machine include a fiber laser source, galvanometer scanning mirrors, lens focusing system, and a workpiece holding mechanism. The fiber laser generates a high-powered laser beam, which is then directed and controlled by the galvanometer scanning system. The scanning mirrors rapidly move the laser beam across the workpiece in a controlled manner, allowing for precise and flexible welding.
