Abstracts

The global Gaming Educational Institution market size is predicted to grow from US$ 4096 million in 2025 to US$ 15422 million in 2032; it is expected to grow at a CAGR of 20.9% from 2026 to 2032.

The Gaming Educational Institution is a rapidly growing sector that focuses on developing educational programs, training, and resources related to electronic sports (esports). It encompasses a wide range of activities aimed at preparing individuals for careers in the esports ecosystem, including professional gaming, team management, event organization, content creation, marketing, and esports-related technology.

Accelerated Establishment of a Professional and Standardized System

As esports gradually converges with traditional sports, the industry's talent requirements are shifting from 'interest-driven' to 'professional standard-driven.' Future esports education will establish a clearer tiered system (such as youth training?professional?coaching pathways), curriculum standards, and certification systems (similar to coaching and referee certifications). Simultaneously, cooperation between clubs, event organizers, and educational institutions will become closer, forming a closed loop of 'training?selection?employment,' improving talent conversion rates and industry standardization.

Expansion of Educational Content from 'Player Development' to 'Entire Industry Chain Talent'

Early esports education primarily focused on professional player training, but as the industry matures, single roles can no longer support industry demands. Future

development will extend to multiple areas such as event operation, content creation, data analysis, business management, and technical support, forming a complete talent development system. This diversification trend not only lowers employment barriers but also brings esports education closer to traditional vocational education models, enhancing its long-term stability.

The Rise of Online + Offline Integration and Globalized Training Models

Esports education is shifting from a single offline or online model to a hybrid model combining online theory, offline practical training, and international exchange. On one hand, online platforms improve the efficiency of basic teaching; on the other hand, offline training camps, bootcamps, and club bases provide high-intensity practical environments. Simultaneously, cross-regional training (such as international training camps and overseas exchanges) will become more common, helping to improve competitive levels and promote the internationalization of educational content.
