The global Gamma Beam Stereotactic Radiotherapy System market size is predicted to grow from US\$ 160 million in 2025 to US\$ 263 million in 2032; it is expected to grow at a CAGR of 7.5% from 2026 to 2032.

Before treatment, the gamma beam stereotactic radiotherapy system can perform image-guided positioning verification on the patient based on CBCT imaging technology and orthogonal imaging technology. The imaging system can detect the patient's positioning deviation before treatment and notify the control system to make necessary position adjustments to ensure that the correct planned treatment target area is delivered to the treatment area. During the treatment process, real-time image guidance based on orthogonal imaging technology can be performed. The real-time image guidance technology can monitor the changes in the patient's position in real time, and make real-time adjustments to the patient's position error that exceeds the clinically acceptable range, thereby ensuring the target position accuracy of radiotherapy, improving the clinical efficacy of radiotherapy, avoiding unnecessary irradiation of normal tissues, and ensuring the position accuracy of patients during treatment.
