The global Gang Drill market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

A gang drill is a tool used for drilling while spraying a bucket of cutting oil from the tip of the drill. This allows machining while blowing off chips, enabling one-step deep hole drilling, fine hole drilling, and beautiful surface finish machining.

Gang drills have excellent linearity, enabling deep drilling and fine hole drilling, even in materials that are difficult to drill, such as high-hardness materials, stainless steel, and heat-resistant steel.

In machining using a gang drill, it is important to consider the speed and feed rate in advance, and it is necessary to carefully establish the conditions for pre-processing and cutting conditions.

The global gang drill market is expected to witness steady growth in the coming years, driven by the increasing demand for efficient and high-speed drilling solutions in various industries. The market is also being propelled by the growing adoption of automation and advanced technologies in manufacturing processes.

One of the key factors driving the growth of the gang drill market is the increasing focus on cost reduction and operational efficiency by manufacturers. Gang drills offer the advantage of drilling multiple holes at once, thereby reducing the overall drilling time and increasing productivity. This is particularly beneficial for industries that require high-volume drilling operations.

Additionally, the growing trend towards miniaturization and lightweighting in industries such as automotive and aerospace is also expected to drive the demand for gang drills.

These machines are capable of drilling precise and accurate holes in small and complex components, making them ideal for applications in these industries.
