The global Gantry & Cartesian Robots market size is predicted to grow from US\$ 2623 million in 2025 to US\$ 4306 million in 2031; it is expected to grow at a CAGR of 8.6% from 2025 to 2031.

Gantry/Cartesian Robots are mechatronic devices that use motors and linear actuators to position a tool. They make linear movements in three axes, X, Y, and Z.

The basic form of a cartesian robot consists of three 'arms.' Each arm can move only along a two dimensional axis — it can only move backward or forwards or, if the arm is vertical, up or down. Each arm is at a right angle to the other two, though, which allows the robot to utilize the motions of all three arms to reach various points in a three-dimensional space. These arms can vary tremendously in size, depending on the purpose of the robot. In some particularly large designs, the horizontal arm will have support on both ends. This is called a gantry robot.

Global Gantry & Cartesian Robots key players include Gudel, IAI, Parker, BAHF, Fibro, etc.

China is the largest market, with a share over 25%, followed by North America and Europe, both have a share over 30%.

In terms of product, XY-X series is the largest segment, with a share over 40%. And in terms of application, the largest application is Loading and Unloading Workpiece, followed by Palletizing and Handling, etc.
