The truss manipulator is a fully automatic industrial equipment based on the rectangular X, Y, Z three-dimensional coordinate system, which can adjust the workpiece position or realize the trajectory movement of the workpiece. Its control core is implemented through industrial controllers (such as PLC, motion control). Through the controller's analysis and processing of various input signals (various sensors, buttons, etc.), and after making certain logical judgments, it issues execution commands to each output element (relay, motor driver, indicator light, etc.) to complete X, Y , the joint motion between the Z three axes to achieve a complete set of fully automatic operation processes.
