The global Garbage Collection Boat market size is predicted to grow from US\$ 1563 million in 2025 to US\$ 2164 million in 2032; it is expected to grow at a CAGR of 4.8% from 2026 to 2032.

A garbage collection boat is a vessel specifically designed to collect and dispose of floating garbage in water bodies. These ships are usually equipped with various devices such as grab buckets, suction devices, and compression devices to effectively capture, transport, and treat waste on the water surface. Garbage collection ships can operate in waters such as oceans, lakes, and rivers, aiming to improve water quality, protect the ecological environment, and reduce water pollution. In 2025, global Garbage Collection Boat production reached approximately 18,796 Units, with an average global market price of around K US\$ 85 per unit.

With the increasing global attention to environmental issues, governments and environmental organizations around the world have a growing demand for water pollution control. As an important tool for solving the problem of surface garbage, the market demand for garbage collection ships has also increased.

Various countries have introduced relevant laws and regulations, requiring the strengthening of water waste management and cleaning work. This provides policy support and financial investment for the market development of garbage collection ships.

With the development of technology, the design and manufacturing process of garbage collection ships continue to improve, enabling more efficient garbage collection and treatment. The application of new environmentally friendly materials and automation

equipment has improved the performance and economy of garbage collection ships.

The acceleration of urbanization and population growth have led to an increase in the amount of water waste generated, especially near urban rivers and lakes. The necessity of garbage collection ships in these areas has further increased.
