The global Garbage Truck Remote Monitoring Solution market size is predicted to grow from US$ 112 million in 2025 to US$ 206 million in 2032; it is expected to grow at a CAGR of 9.3% from 2026 to 2032.

The garbage truck remote monitoring solution is an intelligent sanitation management system based on Internet of Things (IoT), GPS positioning, and cloud platform technologies. This solution installs GPS positioning terminals, onboard video surveillance, fuel consumption sensors, weighing modules, and RFID identification devices on garbage trucks to collect real-time data on vehicle location, operating trajectory, loading status, fuel consumption, and operational data. This information is then uploaded to a cloud platform for centralized management and analysis. Managers can use computers or mobile devices to dispatch vehicles, optimize routes, issue violation warnings, and assess performance, thereby improving sanitation efficiency, reducing fuel consumption and maintenance costs, and achieving digital, visual, and intelligent management of urban sanitation operations.
