The global Garden Robots market size is predicted to grow from US\$ 2003 million in 2025 to US\$ 5123 million in 2032; it is expected to grow at a CAGR of 14.2% from 2026 to 2032.

Garden robots (or yard robots) are autonomous or semi-autonomous service robots designed to operate in residential outdoor environments such as gardens, lawns, and yards. These robots utilize sensors, navigation technologies, artificial intelligence algorithms, and automated control systems to perform tasks such as lawn mowing, cleaning, trimming, irrigation, or environmental monitoring. In 2025, global garden robots production reached approximately 1557.97 K Units. The upstream sector includes raw materials and key components required for robot manufacturing, such as lithium-ion batteries, electric motors, sensors, navigation modules, and control chips. Important technologies include RTK-GPS modules, computer vision cameras, LiDAR sensors, and motor driver systems. Structural materials such as ABS plastic housings, aluminum components, and cutting blades are also essential.

The garden robot market has emerged as a rapidly growing segment within the outdoor service robotics industry. Garden robots are designed to automate maintenance tasks in residential gardens and lawns, including mowing, cleaning, trimming, and monitoring. With advances in navigation technologies such as RTK-GPS positioning, computer vision, and AI-based obstacle detection, modern garden robots are becoming increasingly autonomous and intelligent. Robotic lawn mowers remain the dominant product category, accounting for the majority of garden robot sales worldwide. Europe and North America currently represent the largest markets due to their well-established lawn culture and higher labor costs associated with manual landscaping maintenance. In recent years, demand in the Asia-Pacific region has also grown rapidly as smart home adoption increases and product prices decline.
