The global Gas Catalytic Heater market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Gas Catalytic Heater? Gas catalytic heaters differ from conventional heating with the introduction of the catalyst. Normal ignition temperature of natural gas in air is approximately 1260°F. In the presence of a catalyst, an oxidation- reduction reaction occurs to release the energy in the gas into infrared energy, carbon dioxide, and water vapor at a temperature lower than the autoignition temperature of the fuel. The intensity of the heat energy varies with the square of the distance and travels any distance without loss as long as it does not contact matter which absorbs it.
