A gas concentrator is a device used to increase the concentration of a specific gas in a gas mixture. It works by selectively removing or separating the desired gas from the mixture, resulting in a higher concentration of that gas.

Gas concentrators are commonly used in various industries and applications. For example, in environmental monitoring, gas concentrators can be used to increase the concentration of a specific pollutant gas in ambient air samples, making it easier to detect and analyze. In medical applications, gas concentrators can be used to increase the concentration of a specific therapeutic gas, such as oxygen, for patients who require higher levels of that gas.

There are different types of gas concentrators available, including adsorption-based concentrators, membrane-based concentrators, and cryogenic concentrators. Each type operates on different principles and utilizes different technologies to achieve gas concentration. The choice of gas concentrator depends on the specific gas and application requirements.

United States market for Gas Concentrator is estimated to increase from US$ million in 2024 to US$ million by 2031, at a CAGR of % from 2025 through 2031.
