A gas-cooled welding torch is a tool used in various welding processes, such as MIG (Metal Inert Gas) welding and TIG (Tungsten Inert Gas) welding, to deliver the necessary welding parameters and shielding gas to the weld zone. Unlike water-cooled torches, which use water to dissipate heat, gas-cooled torches rely on a continuous flow of gas, typically a mixture of argon and carbon dioxide, to cool the torch components and protect them from overheating during welding operations. The torch consists of a handle, a nozzle, and a consumable electrode (in MIG welding) or a non-consumable tungsten electrode (in TIG welding). Gas-cooled torches are favored for their simplicity, lightweight design, and ease of maintenance, making them suitable for a wide range of welding applications in industries such as automotive, fabrication, construction, and metalworking.

The global Gas-cooled Welding Torch market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
