Abstracts

The global Gas Coriolis Mass Flow Meter market size is predicted to grow from US$ 1244 million in 2025 to US$ 1910 million in 2032; it is expected to grow at a CAGR of 6.4% from 2026 to 2032.

Coriolis mass flow meters are process instruments that directly measure the mass flow rate of fluids based on the Coriolis effect. When gas or liquid flows through a forced-vibration measuring tube, the flow generates a phase difference or distortion proportional to the mass flow rate. The transmitter directly calculates the mass flow rate by detecting the phase difference between the signals at both ends. Simultaneously, the instrument can also measure the density of the medium through changes in its natural frequency and output multiple parameters such as temperature. It solves the error accumulation problem of traditional volumetric flow meters under gas conditions, which rely on pressure, temperature, and compressibility factor corrections, achieving direct mass measurement without density compensation. It is particularly suitable for stable measurement in trading, complex multiphase, and fluctuating gas-containing conditions. The product is priced at approximately $5,600 per unit, with global sales of approximately 216,000 units.

The market development of Coriolis mass flow meters for gases clearly shows trends across the upstream and downstream sectors: Upstream, the reliance on corrosion-resistant materials such as 316L stainless steel and Hastelloy, along with highly consistent pipe forming and welding processes, ensures zero-point stability. Simultaneously, the sensitivity of drive coils and vibration sensors, along with DSP/FPGA algorithms (such as EGM), enhances measurability under fluctuating gas content. Furthermore, certification requirements such as OIML, API, and AGA drive the development of high-end models. Midstream manufacturing ensures interoperability

through calibration benches, extreme condition testing, and bus protocol integration, while providing multivariable outputs and diagnostic functions to reduce downtime and maintenance costs. Downstream demand focuses on digital metering and carbon accounting in the energy and chemical industries, emphasizing stability under trading and complex multiphase conditions. Meanwhile, the life sciences sector is also showing demand for flow meters ranging from 10 g/h to 27 g/h. The addition of small amounts of water at a rate of kg/h places higher demands on zero-point stability and repeatability. Future development focuses on stronger adaptive algorithms, diversification of sanitary and extreme-condition materials, deepening of protocols and wireless diagnostics, and modular integration of trading and carbon accounting. These trends have jointly driven the continuous upgrading of gas Coriolis mass flow meters in terms of high precision, intelligence, and compliance.

United States market for Gas Coriolis Mass Flow Meter is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
