The global Gas Diffusion Layers for PEMFCs market size is predicted to grow from US\$ 676 million in 2025 to US\$ 2561 million in 2032; it is expected to grow at a CAGR of 21.1% from 2026 to 2032.

Gas Diffusion Layers for PEMFCs are the core functional layers in proton exchange membrane fuel cells. Located between the catalyst layer and the bipolar plates, they are responsible for uniformly distributing reactant gases, removing generated moisture, and conducting electrons and heat. GDLs are typically made from carbon fiber paper or carbon cloth base paper coated with a microporous layer (MPL) and optionally surface-treated (such as PTFE) to form the final product, which can be directly loaded into PEMFC stacks. The thickness of GDL is approximately the thickness of the base paper plus the MPL coating, with a porosity of approximately 75%–80%, and it possesses good mechanical strength, chemical stability, and durability. GDLs are widely used in automotive fuel cells, stationary power generation, portable power supplies, and backup power applications, and are a key material for achieving high power density and long-life fuel cell performance.

In 2025, the global production of Gas Diffusion Layers for PEMFCs is estimated at 9.68 million square meters, with a unit price of approximately US\$57.14–142.85 per square meter, an average price of approximately US\$71.42 per square meter, and a gross profit margin of approximately 9.38%–19.74%.

The Gas Diffusion Layer (GDL) for Proton Exchange Membrane Fuel Cells (PEMFC) is a critical functional component of the fuel cell stack, and its market has been steadily expanding alongside the rapid growth of fuel cell vehicles (FCEVs), stationary power systems, portable hydrogen devices, and backup power applications. Market growth is

primarily driven by downstream adoption, policy support, hydrogen infrastructure development, and fuel cell commercialization, while supply chain reliability, material consistency, and standardization of parameters remain challenges. Technological innovation focuses on high-performance microporous layer (MPL) coatings, PTFE surface treatments, high durability, lightweight design, and high power density optimization. Regionally, the Asia-Pacific market (China, Japan, Korea) leads demand, while North America and Europe continue to grow in transportation and stationary power sectors. As fuel cell technology evolves and markets mature, GDL manufacturers are expected to compete through performance optimization, cost control, and downstream customization, leading to high-value-added products and differentiated supply chain strategies.
