A Gas Dilution Meter, also known as a Gas Dilution Meter, is an instrument used to measure gas concentrations, commonly used in medical and industrial applications. It works by diluting a gas sample with air in order to reduce its concentration for measurement and analysis.

A Gas Dilution System typically consists of a high concentration gas source and an air source, which are mixed in a blending chamber to create a diluted gas sample. The blending chamber typically contains a sensor for measuring gas concentrations. The design of the blending chamber can be adjusted for different applications to achieve the desired gas concentrations.

In the medical field, Gas Dilution Systems are commonly used for measuring lung function and diagnosing respiratory diseases. In the industrial field, Gas Dilution Systems are commonly used for monitoring concentrations of hazardous gases in the air to ensure workplace safety.

United States market for Gas Dilution Meter is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
