The global Gas Distribution Panels market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

When each instrument requires a different delivery pressure and flow rate, the purge gas can be supplied from the gas purification system to multiple gas chromatographs through a gas control box. The gas control box consists of on/off valves and pressure regulators to control the gas flow and delivery pressure, as well as meters to indicate the system inlet gas pressure and instrument delivery pressure. This facilitates the use of different types of gas chromatographs in the same gas line for different types of applications with completely different working pressures and flows.

United States market for Gas Distribution Panels is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
