The research report highlights the growth potential of the global Gas Feed System market. Gas Feed System are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Gas Feed System. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Gas Feed System market.

Chlorine Gas is still the most common and cost effective disinfection technology for water and wastewater treatment applications. Gas feeders equipment is now installed vacuum feed in lieu of pressure feed and is direct container mounted vs. remote mounted vacuum regulators. Chlorine gas under pressure is fed to the inlet pressure reducing valve, the needle of which is seated on a diaphragm. At the water end of the system, pressure differential is applied across a venturi by a boost flow which causes the venturi to suck.
